Implementation of subnetting in Cisco Packet Tracer Simulator

Exp No: 09
Date : 29/4/26

Aim:

To implement the subnetting in Cisco Packet Tracer Simulator.

Procedure:

i) Open Cisco Packet tracer and create a new network topology

ii) Add the required routers switches and PCs to work space

iii) Connect the device using appropriate copper cables

iv) Use the network 192.168.1.0/24 and divided into /27 network.

v) use enable and config terminal in the routers < I4

vi) Enter the interface configuration terminal and assign IP using

(i) ip address <IP address> 255.255.255.224

(ii) no shutdown

ix) Configure the required switch port in access mode.

x) Assign each PC its IP address, subnet mask and default gateway.

xi) Repeat the configuration all required subnet

xii) Use the ping command to test connectivity between PC's and the routes.

The link is successful, the network is configured successfully.

RESUT:

Thus implementation of subnetting in CISCO packet Tracer has simulator studied.
